

### *What is Tappecue SessionBook?*

Tappecue SessionBook is a paid, web-based feature that works in conjunction with your Tappecue device by storing the historical log of time/temps of your Tappecue session(s) onto the Tappecue Cloud for ease of access, giving the consumer a “Book” to store data, notes, recipes, images, etc. thus creating a wealth of BBQ data to improve their processes and, as such, their final results.

### *How does it work?*

For subscribed users, when a session is ended, the consumer will receive a pop-up alert asking if they would like to save the session. If it is marked to save, then the saved session will be stored in the consumer’s Tappecue SessionBook account (which is the same as your Tappecue account). To access the stored data, the consumer will need to log in with their Tappecue account ID and password at [www.tappecue.net](http://www.tappecue.net). Each saved session will have time/temp data points at a time interval of 2 minutes and each saved session will be visible at any time in your Tappecue SessionBook.

### *Why is Tappecue SessionBook a Paid-Feature and what are the charges likely to be?*

The Tappecue SessionBook stores all historical data on the Tappecue Cloud so that you can come back to it and access it whenever. The Tappecue cloud servers cost money to maintain high levels of stored data and when there is a buildup of data, the fees increase as well. Each customer is responsible for their share of data usage and stored data. Fortunately, for the end consumer the fees aren’t too bad. A customer can choose to save unlimited sessions for a monthly charge of \$9.95 with no long term commitments, or save a single session for \$1.99/each. Those who opt for the monthly subscription will need to wait 1 business day for their subscription-level access to become available. So it’s best to sign up for the monthly subscription a couple days before you know you want to end a session that you’ll want to save, otherwise you will have to purchase it at \$1.99.

### *Can data be exported?*

When a session is ended, the consumer may still choose to send the csv file to his/her email. Tappecue Session Book will only have pdf printouts available. It may be beneficial for restaurants/food processors and health inspectors to have a non-modifiable log of time and temps.

### *Can images be uploaded from my phone?*

Yes, use the browser app on the phone and navigate to [tappecue.net](http://tappecue.net). From there you can navigate to images and upload them from your phone. There is, however, a restriction on the size of the image of 4 MB.

### *Can notes show up in the graph?*

Yes, however, as of now there is no way of adding notes directly to the graph. In order to see notes on your graph you will need to add them in the Temperature link instead of the Graph link. First, you will need navigate to the graph and find the time/temperature point in which you want to add the note. Hint: Clicking on the legend of probes turns graph line off and on for viewing one probe at a time. Remember the time point you want to add the note at. Notes can only be added on the view of all the temps. Once you're in the table view of all temps, you can filter for the probe wanted and navigate to the time you remembered and next add your note. They will then show up in the hints of your graph.

### *What benefits do I get as a beta-tester?*

Other than helping develop a beneficial product feature that you can use and love, you will get to keep all the saved session logs and data you incurred while beta-testing for free. Once the Tappecue SessionBook is launched, all beta-testers will need to either subscribe to continue using the feature or pay for each individual session that you will want to save. The beta-testing period will be at least one month and may be longer depending on the testing results.

### *What are my requirements as a beta tester?*

We do require that you agree to not share the mobile app that is used for beta-testing with any other person. iPhone users will be getting an email from Test Fairy with the install of the iOS mobile phone beta app. Android users will be getting an email with the Android mobile app to install. Please respect this one request. If you agree to the above requirement, then sign and date below. Thank you for your help!
